

# Calculations Using the Equilibrium Constant Name:\_\_\_\_\_

If the above reaction is at equilibrium and the partial pressure of CO is 10.0 kPa and the partial pressure of O<sub>2</sub> is 5.00 kPa, what is the partial pressure of the CO<sub>2</sub>?

- 2) For the equation above pure CO<sub>2</sub> was put into a container. when the system reached equilibrium, the partial pressure of the CO<sub>2</sub> is measured as 40 Torr and the partial pressure of CO is 4.0 Torr. What is the partial pressure of the O<sub>2</sub>?

A measured amount of H<sub>2</sub>S was added to water and allowed to come to equilibrium. At equilibrium the hydrogen ion concentration was 0.0010. What is the equilibrium concentration of H<sub>2</sub>S?

- 4) For the equation above, pure H<sub>2</sub>S was added to water and the resulting solution was allowed to reach equilibrium. At equilibrium the concentration of H<sub>2</sub>S was measured to be 2.0 M. What are the concentrations of the H<sup>+</sup> and HS<sup>-</sup> ions?

If 1.00 mol of HCl is put into a 1.00 L flask, what will be the equilibrium concentration of each gas at equilibrium?

If 5.00 mol of pure HCN are dissolved in 1.00 L of solution, what will be the equilibrium concentration of H<sup>+</sup> and CN<sup>-</sup>?

If the partial pressure of O<sub>2</sub> is 10.0 mmHg, PCl<sub>3</sub> is 60.0 mmHg and the partial pressure of PCl<sub>5</sub> is 1000.0 mmHg, will the mixture react to produce more products (shift right), more reactants (shift left) or is it already at equilibrium?

If the partial pressure of NO<sub>2</sub> is 400.0 mmHg, and the partial pressure of the reactants is 300.0 mmHg each, will the mixture react to produce more products (shift right), more reactants (shift left) or is it already at equilibrium?

If the hydrogen ion concentration is 2.0 M, the sulfate ion concentration is 1.0 M and the acid concentration is 0.010M, will the mixture react to produce more products (shift right), more reactants (shift left) or is it already at equilibrium?

Answers: 1) 316 kPa    2) 0.50 Torr    3)  $5.0 \times 10^{-5}$  M    4) both are 0.20 M

5) [H<sub>2</sub>]=[Cl<sub>2</sub>]=0.0714 M and HCl = 0.857 M    6) [H<sup>+</sup>]=[CN<sup>-</sup>]=0.0702 M and [HCN] = 4.93 M

7) shift left    8) shift right    9) shift right
